

# Booster Fan Plus

## Cyclone Booster Fan Plus

Almost every central air home lacks sufficient ventilation. Some rooms may be more in need than others. Even with well-designed heating and cooling systems there is usually at least one room in the house that lacks proper airflow. That's bad airflow. Even the best homes have it. Cyclone Booster Fan boosts the air from the vents outward into the rooms where it is needed most, making every room in your home equally comfortable, exactly the temperature set. Compared to the costs of turning up the thermostat or running an electric heater or air conditioner, the savings are tremendous.

## Specifications

- Air Flow Volume: 45 CFM
- Electrical Connection: 120V/60Hz
- Electrical Consumption: 12.5-14 Watts
- Finishes: White, Brown, Black
- Sones: 1.8

## Features

- Boosts the air from the vents outward into the rooms
- Helps to save energy cost
- Lowers heating and cooling costs
- Makes every room in your home equally comfortable
- Equipped with a built-in thermostat
- Turns on automatically with the furnace or air conditioner
- Fits both 3"x10" and 4"x10" slots

## Steps

1. Set the Booster Fan to turn on at the temperature you like
2. Place the booster fan into the floor socket and plug into an outlet
