

CM300- BOOSTER FAN PLUS

Most central air homes suffer from inadequate ventilation, with certain rooms needing it more than others. Even well-designed HVAC systems often leave at least one room with poor airflow—this is a common issue. Cyclone Booster Fan resolves this by enhancing air distribution from vents, ensuring uniform comfort in all rooms at the desired temperature. It's a cost-effective solution compared to cranking up the thermostat or using electric heaters/air conditioners, resulting in significant savings.

Features

- Boosts the air from the vents outward into the rooms
- Helps to save energy cost
- Lowers heating and cooling costs
- Makes every room in your home equally comfortable
- Equipped with a built-in thermostat
- Turns on automatically with the furnace or air conditioner
- Fits both 3"x10" and 4"x10" slots

Features

- Set the Booster Fan to turn on at the temperature you like
- Place the booster fan into the floor socket and plug into an outlet

Specifications

- Airflow Volume: 45 CFM
- Electrical Connection: 120V/ 60 Hz
- Electrical Consumption: 12.5- 14 Watts
- Finishes: White, Brown, Black
- Noise level: 1.8 sones

Model	Color	Venting
